

Average Breathing Resistance

(measured in mm H₂O)

Dentec Safety's Diskit® P100 Filter outperforms major competitors in side by side tests.

The patented Diskit® design uses space plenums that allow the filter media to evenly "load" to the edge, resulting in noticeably lower breathing resistance compared to competitive filters.

Light weight and ultra low-profile, the Diskit® P100 Filter from Dentec Safety revolutionizes wearer comfort and compatibility with other PPE. Only 5/8 " thick, the Diskit® weighs just 0.8 oz, yet the rigid internal frame prevents crushing and extends filter life.

Diskit® is compatible with Dentec Safety Comfort-Air® Respirators. NIOSH approved.
